

AVANTI SLINGSHOT® AND HP PRINTOS: CONTROL THE COMPLETE PRODUCTION PROCESS

INTEGRATION WITH HP PRINTOS

Avanti Slingshot®'s open and modular platform and HP's PrintOS APIs create a seamless system that collects information about the jobs running through your shop. You can use the detailed and accurate data to automatically calculate the actual costs of producing any job. When you compare those costs to the initial estimate generated in Slingshot® you will capture the exact profitability of any job with an accuracy that's never been seen.

The HP PrintOS Jobs app is one of several access points where Avanti Slingshot® MIS can be integrated into the HP PrintOS ecosystem. This makes detailed job production data visible to Avanti Slingshot® and enables you to leverage the latest HP printing technologies flawlessly.

Avanti Slingshot® captures multiple data points about the status of current jobs and accesses historical data about previous print runs from PrintOS Jobs app, including substrates used, impressions printed, number of print attempts, and overall job-processing times. Avanti Slingshot® Print MIS is the single interface for all devices that support HP PrintOS Jobs app and for any JDF-enabled machines that are already in place.

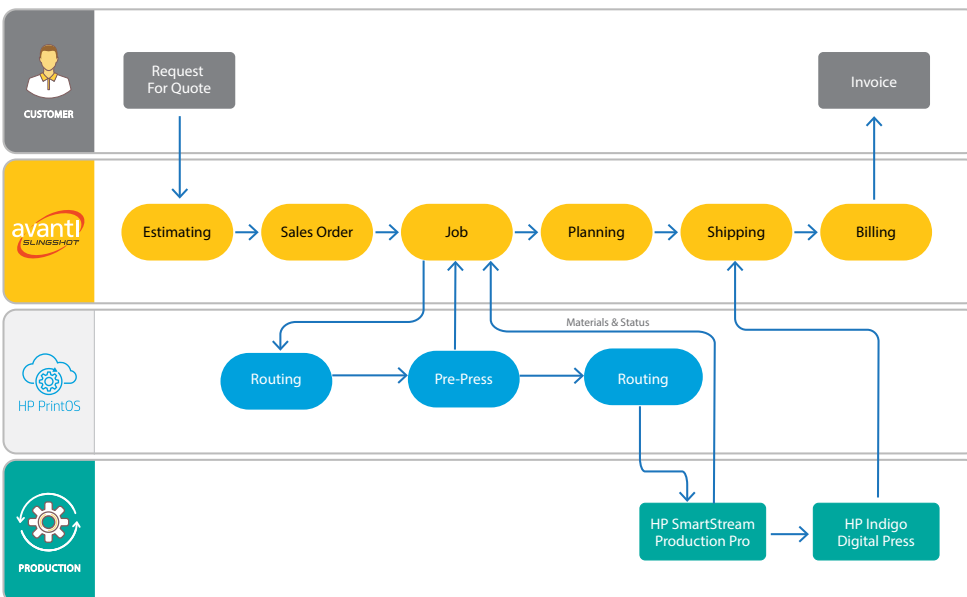

HP PrintOS

About HP PrintOS

PrintOS is a cloud platform with web and mobile apps connected to HP presses and printers. With PrintOS, you, your production-floor managers and your operators can share vital operational information and make your HP presses more productive.

BENEFITS AT A GLANCE

With the combined power of HP PrintOS and Avanti Slingshot® Print MIS you'll experience a completely automated closed-loop business management system that maximizes your resources. You'll be able to drive more jobs through your shop in less time, with fewer people, while improving overall service levels.

Calculate Job Profit

- Capture near real-time workload status and production information from any job, including substrates used, impressions printed, number of print attempts, and overall job processing times.

Operational Improvements

- Increase job speed, quality, and consistency by linking together print-specific applications
- Clearly track the status of every print job through every stage of production
- Reduce costs and errors by eliminating manual entry of job production details and application hand-offs

Improved Service Levels

- Automatically update customers on job status and eliminate manual, time-consuming phone calls and emails
